

AMENDMENT TO THE ABSTRACT

A method and system for providing service information on a server for a user device is provided, comprising the steps of: inputting a user input command through a user device, transmitting the user input command to a command processing component ~~means~~, wherein the command processing component ~~means~~ interprets the user input command and transmits it to the server, and providing the service information to the user device according to the user input command transmitted to the server. According to the method and system of the invention, it is easy to access a variety of information provided by a server through a user device, without being affected by its limited input capacity.
